

XVIVE XV5 DELAY PEDAL

We take a close look at some of the most prominent effects units available on the market for guitar and bass.

Designed by US electronics specialist, Howard Davis, the Xvive range of micro-effects has enjoyed a great deal of success over the last few months, says the firm, providing optimised tones aimed at offering guitarists a plethora of unique sounds.

The XV5 Delay pedal, one of the flagships of the new range, has garnered acclaim on account of its warm, vintage delay sounds, which makes the product suitable for just about any style of music, as well as its competitive price tag.

Dedicated echo, feedback and time controls provide easy access to a myriad of classic delay and echo settings, from snappy slapback to 'arena' guitar solo sounds.

Its compact, rugged metal chassis renders it ready for the rigours of life on the road, and true bypass operation helps to keep the guitar tone preserved when not in use.

Compatible with the majority of nine-volt power supply units, the XV5 retails at £52.99.

FACTS & FIGURES

RRP: £52.99
